Hi,

with 1.23 I'm unable to access my NAS Synology using https:

Error 60 : Peer certificate cannot be authenticated with given CA certificates

But the above error was present in 1.16 too, but in 1.16 I ignored SSL errors and it was OK.

Now, in 1.23, when I ignore SSL errors in OWB Security settings

Error 51 : SSL peer certificate or SSH remote key was not OK

I just rechecked the 1.16 version and it works well when I "Ignore SSL errors"

Is somebody with the same error ?

Thank you

edit : I tried too your beta version, same problem
