with 1.23 I'm unable to access my NAS Synology using https:

Have any link to ? (can send me via mail some test access), as if i can't test it and compare with morphos version, then can't say what wrong. You of course may try to download latest .crt from curl site, just in case.

PS. test please new version also in terms of arexx (as you make all those players for odyssey, so to see how it all works now, because port now changed).
