Out of curiosity, did you test if (in the MorphOS version) the keyboard works also in all other parts of the OWB interface ?

Not to count the sidepanels (that is already fixed as you say), actually on our port keyboard works only in bookmark window, but not in other areas

Prefs, download, network, cookie windows etc .. in all that area keyboard seems currently unsupported .. eventually i might open a new ticket also for them .. what do you think ?

EDIT: all autofixes by that new fix which make sidepanels works too. They (keys) works now everywhere where expected.

More of it, as far as i can see in some parts keys didn't works on morphos version, but works on aos4 one.

EDIT2: yes, can configrm that on morphos for example in Prefs keys didn't works, as well as in scripts, searchengines, etc. But for us it works everywhere.
