@Severin

The way is have a Mplayer plugin that made youtube and other sites think it is the official youtube player and Composition and Overlay will increase great the video performances (720 x1000/x5000 and 480p on pegasos2, Xe and so and so)

This thing is already done on Gnash and swfplayer (linuxPpc) and the same is made by swfplayer from Fab for Odyssey on Mos.
