The way is have a Mplayer plugin that made youtube and other sites think it is the official youtube player and Composition and Overlay will increase great the video performances (720 x1000/x5000 and 480p on pegasos2 , Xe and so and so)

Yes I think it will help if Composition and ARGB bitmaps was used by OWB, like I did with the vo\_comp video output for mplayer, I guess that's work for Kas1e.
