I have no probs for myself to update mui :) as i say i just copy whole content of the archive over my system mui dir, and everything works all the time . I.e. i just unpack mui archive, and do copy whole MUI dir on top of my system:MUI, that also copy all the libs and stuff where need it (and didn't where it didn't need it). I didn't copy anything else to anywhere, all the libs for me are in mui dir, not in system libs. Maybe installer broken, dunno. Someone need to check and make a BZ on muidev.de if have problems with. For me everything works fine all the time with way i update it (i.e. manual copy)

@Tony

Will be better if you will create a ticket on muidev.de if you have problems with and Thore for sure will fix it (if there anything to fix). Because if you will not make BZ about , probably no one else will make that BZ, and installer will be broken all the time (if it indeed installer's fault).
