Dont' know as i'm using default settings in all emulators, yep DGen and GenesisPlus look like using 320x240 (and this reso should be the default for MegaDrive i think) and i didn't note the higher resolution with FBA, that may explain the different speed

But my question is: is there are method to scale down the resolution so to test (and test with or without other effects) in current FinalBurn ?

Checked all the option inside FBA but didn't found any.
