Again donated, i enjoy your work very much

OSD Launcher works now well on my X1000. We can use Mixer for the X1000. A very big step forward

I have here a PS2 pad too but the problem that the hat and the left analog

stick after first use stand at the right direction and go no back.Maybe you can fix it.

Competition pro works very good with it but a PS2 pad is much better for this kind of games

PS2 pad have the same problem in AmigaInput.it stand at the right side after first use.

FPSE works well with my PS2 pad, there are no problems.

FPSE use a joyai.dll plugin, perhaps you can use it for FinalBurn too
