@samo79

"atleast it fix the launch handler issue" ?

Are you sure, I tested with QPDFView and the drawer containing the pdf doesn't open.

@Alfkil

Before to leave, I don't remember if you still fixed these points

1) copy in a WebKit gadget, copy the whole HTML code in the clipboard

2) QApplication::keyboardModifiers() doesn't work

3) remove the debug output in the WebKit

Thank you ;)
