@logicalheart

Thank you very much for this beautiful video which put much value in fba and the work on this project.

Soon a new version that will improve some functions and add new games and fix some hardwares that were not supported or worked poorly.

This version will also provide 5 fps more and it will be good for machines that lack of raw power

Thank you for your support and continue to use my work I am pleased even if I do not show assé forums because I can not do the work and be on the forums at the same time thank you for your understanding.
