I have both of libqsqlite.so and libsqlite3.so at the correct places. Regarding the latter, I'm using the one that comes with OS4 (I think it was first introduced in Update 3). Is that one no good? I don't have OS4.1 FE, so that shouldn't be a problem.

Thanks for the tip, I'll try replacing it with the one you included in the Qt archive. I'll try running the example programs too.
