I don't use CMake to built brewtarget, but a plain old makefile. I just noticed a few linker warnings during the rebult:

Quote:

ld: warning: libintl.so, needed by /qt/lib/libQtCore.so, not found (try using -rpath or -rpath-link)

ld: warning: libssl.so.1.0.0, needed by /qt/lib/libQtNetwork.so, not found (try using -rpath or -rpath-link)

ld: warning: libcrypto.so.1.0.0, needed by /qt/lib/libQtNetwork.so, not found (try using -rpath or -rpath-link)

ld: warning: libsqlite3.so, needed by /qt/lib/libQtSql.so, not found (try using -rpath or -rpath-link)

As far as error messages, I get none. I just don't have any available sql plugins.
