As i found in google, even if ppls says that R7-250 are "rebranded 7750" , it is still slower than real HD7750. For example: [there](#) some compassion. Of course it is tests from windows, but at least there it also show that r7-250 a little slower than real hd7750.

Also probably zzd10h tests done on update6, and not on FE, maybe also related.
