Hello

Note

that Cow3D is a pure Warp3D prog (No MiniGL nor GL nor Mesa inside)

So with Cow3D you benchmark the `cpu_doing_the_rotation` + `warp3D_drawing_speed`

When typing the key 'b' you bufferize all the rotations vertices ( I mean the CPU no more compute the rotation)

So then benchmark only the `warp3D_drawing_speed`

Alain Thellier - Cow3D & Wazp3D

BTW Does someone tested the Microbe3D's Demo-View tool with this new Warp3D ?
