Cow3D being very picky when it comes to Warp3D or Wazp3D.

Be sure to completely get rid of any Wazp3D incarnations on your system partition (or rename them)...it might pick up one Wazp3D library and another Warp3D...mixing them up

@all

btw: is Warp3DPPC.library still needed?

I also still have those in HWDrivers

W3D_Avenger.library W3D_Napalm.library W3D_Permedia2.library W3D_R200.library
W3D_Radeon.library

and this in GFXDrivers

W3D_Picasso96.library
