How to make Quake II HD rendering work flawlessly :

- 1° Follow the readme regarding which files to copy and where
- 2° Do NOT modify the TOOLTYPE of the icon (mus be on Shell and not Workbench)
- 3° A 1st launch, press ESC when youu see the 1st cinematic in order to configure your options

It should work right away then.

Tested on AmigaONE X1000 with Radeon HD 9250 128 Bits and PCI<->PCI-E 66Mhz adapter in 1024x768 :

map demo1.dm2 : 19,1 FPS

map demo2.dm2 : 19,2 FPS
